

FPC[®] SV[™]

FECAL PARASITE CONCENTRATOR SPECIAL VERSION

A patented apparatus and recommended method for the concentration of intestinal helminth eggs & larvae, protozoan cysts and coccidian oocysts in small animals.

FPC[®] SV[™] is the newest member of the well known FPC[®] fecal parasite concentrator family used in clinical microbiology for over twenty years. The FPC[®] SV[™] concentrates aliquots

of fresh stool or specimens preserved in 10% formalin.

When used in conjunction with the 20 ml FTK II Fecal Transport Kits, FPC[®] SV[™] provides an integrated system to collect, transport and process fecal specimens for the ova and parasite examinations.

FPC[®] SV[™] comes with a strainer basket and a plunger inserted in the top of the tube, ready for use. Once the fecal sample is placed into the strainer basket and the cap replaced, the FPC[®] SV[™] minimizes lab personnel's exposure to the specimen and virtually eliminates the odors associated with fecal specimens.

One case provides materials for 100 tests. Included are preassembled centrifuge tube-strainer units containing 10% formalin, centrifuge tube caps, dispensing spoons, trays, applicator sticks, transfer pipets, biohazard bag and instructions.

Screw cap

Plunger

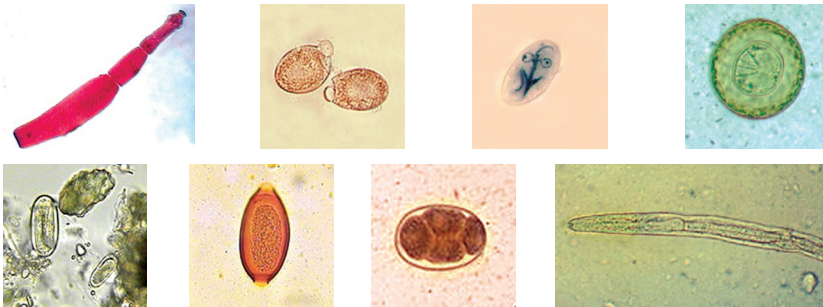

Strainer basket with 0.6mm x 0.6mm holes

15 ml centrifuge tube filled with 8 ml 10% buffered formalin

- All the advantages of FPC[®] closed system in one single tube.
- Can be used with either fresh or preserved specimen.
- Ready-to-use with much simplified procedure (microscope & tabletop centrifuge required). Lab results can be reported in minutes.
- Virtually odor-free sanitary processing.
- Illustrated brochure comparing pros & cons of Zinc Sulfate flotation method vs FPC[®] SV[™] centrifuge/sedimentation method included in every case.
- Upgrade to more accurate test results and a more profitable practice.
